

# Welcome to R Bootcamp!

*A hopefully more-or-less painless introduction to R*

*TWS-WS 2020*

- **When?** Monday January 3 2020
- **Where?** TWS-WS, Redding CA
- **What to prepare?** Please bring your laptop computer! If possible, install R and RStudio prior to coming to the first bootcamp (see links).

## Facilitators

Kevin Shoemaker

Department of Natural Resources and Environmental Science

Office: Fleischmann Agriculture 220E

Email: kshoemaker@cabnr.unr.edu

Mitchell Gritts

Nevada Department of Wildlife

Email: mgritts(at)ndow(dot)org

## Contributors

Perry Williams

Department of Natural Resources and Environmental Science

Office: 240 Fleischmann

Email: perryw(at)unr(dot)edu

Mitchell Gritts

Nevada Department of Wildlife

Email: mgritts(at)ndow(dot)org

Christine Albano

Lead Scientist at Conservation Science Partners and doctoral student at DRI

Email: christine(at)csp-inc(dot)org

Jessi Brown

Department of Biology

Office: Fleischmann Agriculture 244

Email: jlbrown(at)unr(dot)edu

Jonathan Greenberg

Department of Natural Resources and Environmental Science

Office: 241 Fleischmann Ag

Email: jgreenberg(at)unr(dot)edu

Ken Nussear

Department of Geography

Office: Mackay Science Room 223

Email: knussear(at)unr(dot)edu

Stephanie Freund

Office: Knudtsen Resource Center 119 Department of Natural Resources and Environmental Science / USDA

Agricultural Research Service Email: smfreu(at)gmail(dot)com

Paul Hurtado

Department of Mathematics and Statistics

Office: Davidson Math and Science Center 220  
Email: phurtado@unr.edu

## About

The statistical programming software ‘R’ is one of the fundamental tools for modern data exploration and analysis, and a basic ability to use R (for data processing, statistical analysis, simulation modeling and production of high-quality figures) will make upcoming classes, research, and graduate school less intimidating.

This ‘bootcamp’ consists of a series of short submodules, each of which covers a particular skill (e.g., reading in data, writing functions). Each submodule will consist of a short lecture, a demo (worked examples), followed by hands-on activities. The main goal of this workshop will be to ensure participants have enough proficiency and confidence with data operations and programming in R to engage in productive, self-directed learning and problem-solving. The workshop is primarily intended for students with little prior experience with R, but may be useful for others as a refresher- especially the latter portion, which will delve into more advanced topics. The first modules will focus on R syntax, data management (loading data, writing to file), data summaries and visualizations, R packages (loading, getting help), and basic statistical operations. The second set of modules will focus on some more advanced programming operations (loops, functions, debugging etc.), more advanced graphical visualizations and spatial analyses, and working with large data sets. We may not get through all modules in the allotted time, but participants are encouraged to work through the remaining material on their own. Note - All are welcome to attend these workshops, but students who have not completed an intro statistics class may struggle with some of the material—especially the material covered in the final modules.

All code will be available as scripts that you can download from this website (at the top of each module page on this website) and load up in RStudio. That way you won’t need to constantly copy and paste from the web!

## Before we get started...

Before we dig in and get started with the modules, you should have installed R and RStudio. Here are some links to help you get started:

[Download and install R](#)

[Download and install RStudio \(use free version!\)](#)

Also, it can be very helpful to print out an R ‘cheat sheet’ and bring that with you (we will also have some available at the workshop!). Here are some links:

[Base R Cheat sheet](#)

[R reference card](#)

Okay, now we’re ready to go!

–go to first module–
