Welcome to R Bootcamp!

A hopefully more-or-less painless introduction to R

February 2019

- **When?** Monday, February 4, 2019: 8:30am â€“ 5:30pm
- **Where?** TBD

- **What to prepare?** Please bring your laptop computer! If possible, install R and RStudio prior to coming to the first bootcamp (see links).

Facilitators

Kevin Shoemaker
Department of Natural Resources and Environmental Science
Office: Fleischmann Agriculture 220E
Email: kshoemaker@cabnr.unr.edu

Mitchell Gritts
Nevada Department of Wildlife
Email: mgritts(at)ndow(dot)org

Contributors

Perry Williams
Department of Natural Resources and Environmental Science
Office: 240 Fleischmann
Email: perryw(at)unr(dot)edu

Christine Albano
Lead Scientist at Conservation Science Partners and doctoral student at DRI
Email: christine(at)csp-inc(dot)org

Jessi Brown
Department of Biology
Office: Fleischmann Agriculture 244
Email: jlbrown(at)unr(dot)edu

Jonathan Greenberg
Department of Natural Resources and Environmental Science
Office: 241 Fleischmann Ag
Email: jgreenberg(at)unr(dot)edu

Ken Nussear
Department of Geography
Office: Mackay Science Room 223
Email: knussear(at)unr(dot)edu

Stephanie Freund
Office: Agricultural Education 002
Newingham lab at ARS
Email: smfreu(at)gmail(dot)com

Paul Hurtado
Department of Mathematics and Statistics
Office: Davidson Math and Science Center 220
Email: phurtado@unr.edu

About

The statistical programming software 'R' is one of the fundamental tools for modern data exploration and analysis, and a basic ability to use R (for data processing, statistical analysis, simulation modeling and production of quality figures) will make upcoming classes, research, and graduate school less intimidating.

This 'bootcamp' consists of a series of short modules, each of which covers a particular skill (e.g., reading in data, writing functions). Each module will entail a short lecture, a demo (worked examples), and then hands-on activities with helpers present if you get lost or have any questions. The main goal of this workshop will be to ensure participants have enough proficiency and confidence with data operations and programming in R to engage in productive, self-directed learning and problem-solving. The workshop is primarily intended for students with little prior experience with R, but may be useful for others as a refresher- especially the second workshop, which will delve into more advanced topics. The first modules will focus on R syntax, data management (loading data, writing to file), data summaries and visualizations, R packages (loading, getting help), and basic statistical operations. The second bset of modules will focus on some more advanced programming operations (loops, functions, debugging etc.), more advanced graphical visualizations and spatial analyses, and working with large data sets. We may not get through all modules in the allotted time, but participants are encouraged to work through the remaining material on their own. Note - All are welcome to attend these workshops, but students who have not completed an intro statistics class may struggle with some of the materialâ€"especially the material covered in the final modules.

All code will be available as scripts that you can download from this website (at the top of each module page on this website) and load up in RStudio. That way you won't need to constantly copy and paste from the web!

Before we get started. . .

Before we dig in and get started with the modules, you should have installed R and RStudio. Here are some links to help you get started:

Download and install R
Download and install RStudio (use free version!)

Also, it can be very helpful to print out an R 'cheat sheet' and bring that with you (we will also have some available at the workshop!). Here are some links:

Base R Cheat sheet
R reference card

Okay, now we're ready to go!

–go to first module–
